Dear Dr. Zhu,

We are pleased to inform you that your manuscript, "The Swiss Army Knife of Time Series Data Mining: Ten Useful Things you can do with the Matrix Profile and Ten Lines of Code", has been accepted for publication in Data Mining and Knowledge Discovery subject to you making required changes by 19 Aug 2019.

When preparing your revised manuscript, you are asked to carefully consider the editor and reviewer comments which are attached, and submit a list of responses to the comments. Your list of responses should be uploaded as a file in addition to your revised manuscript.

In order to submit your revised manuscript please log on and you will find your submissions in submissions needing revision box. Click submissions needing revision, click edit submission, click attach files, and upload your revised version. It is essential that you use this process and not submit the manuscript as a new submission.

Please note: When uploading your revised files, please make sure only to submit your editable source files (i. E. Word, tex).

Also, if you opt for a tex file, only one .tex file per submission should be used to guarantee proper building. If it doesn't build, it is because the .sty files also have to be uploaded. EM does support most new versions of LaTeX, but the older ones are not. More details are listed at the bottom of this email should you need it.

<https://www.editorialmanager.com/dami/>

We look forward to receiving your revised manuscript.

Best regards,

Keerthana Govindarajan
JEO Assistant
Data Mining and Knowledge Discovery
COMMENTS FOR THE AUTHOR:

Dear authors,

The handling editor is now happy with your paper and recommends its publication. However, it seems you have not seen my comments on the previous version. For your convenience, I repeat them here. Please address them in a final version:

First and foremost, I think that there has been a misunderstanding between you and Reviewer #2. I don't think that reviewer #2 wanted to diminish your work by stating that it might also be suitable for a blog. There are many excellent blogs that are extremely helpful for doing research, and my students often ask me how to cite these. My view on this is, like your view, that there should be a place for such material in scientific publications. The reviewer is more cautious on this, and I also perfectly understand his/her point. I also appreciate that s/he asked for my opinion on this paper.

Conversely, I can see why the reviewer is upset by the somewhat flippant comment, that the 250+ hours of work

spent on this paper justify its publication. I don't think that you wanted to say that you deserve this publication because of this (which is what the reviewer apparently understood), but I can see why the reviewer did not take that lightly (I also think that 250 hours, which is about a month of work, is not all that much for a paper in DAMI, BTW). In any case, I think we all agree that the amount of work spent on a paper should not have any influence on the decision of whether it should be published or not. So please address the reviewer's comment in a more factual and objective way.

In addition to the few remaining comments by the reviewers and the editor (see below), please also pay attention to the following points:

- Although your paper is no application paper in the narrow sense, I think it shares many similarities with application papers. In particular, I believe that there is something to learn for applied research from your case studies. Thus, I would suggest that you re-submit the final version of your paper as an "Application" (select this Paper Type upon resubmission). This has the effect that it goes as the first paper into a newly formed special topical collection on applications (cf. <https://link.springer.com/journal/volumesAndIssues/10618?tabName=topicalCollections>).
- carefully read the author instructions that can be found at <https://www.springer.com/computer/database+management+information+retrieval/journal/10618>, and make sure that your paper conforms to them. Your paper will be type-set by Springer, and not print in the way you turn it in. It is thus particularly important that you provide all information as required (e.g., citations and references).
- carefully spell-check not only the text of the paper, but also the references (in particular with respect to capitalization of abbreviations etc.).
- double-check that your figures are legible in black-and-white. For example, it often helps if in addition to colors, different line types or point symbols are used. While a color version of your article will be available on-line, the article will be printed in black-and-white.
- please fix the bibliography, and provide full publication information for all entries (all page numbers, avoid citations to TRs and arxiv if they have been later published at different venues, provide full conference names in addition to abbreviations, etc.). This will help the readers (and the production staff at Springer) to identify the right publications.
- be aware that the production staff at Springer will change your citations from numbered citations to an author-year style. This does not always come out as expected, so I would recommend that you submit a final version with author-year citations where you have personally checked that they come out as you want it. See also previous publications in this journal and the instructions for authors.
- be aware that the production staff at Springer will change your tables into a format that only uses horizontal lines. You may want to be pro-active on that and provide them with an appropriate format (e.g., using the LaTeX package 'booktabs').

I am looking forward to your resubmission.

Best regards,

Johannes Fürnkranz
Editor-in-Chief
Data Mining and Knowledge Discovery

Dear Yan Zhu,

Thanks for addressing the final concerns of Reviewer 2 and overall for preparing an excellent manuscript for DAMI.

I am delighted to accept your paper! Congratulations!

Yours sincerely,

Panagiotis Papapetrou
Action Editor
Data Mining and Knowledge Discovery

Reviewer #2: Dear authors,

Based on discussion with the EiC, I understand the journal would be happy to include a paper that provides a kind of guidelines/templates for future applications and that makes a previous research result (here the Matrix Profile) more accessible and useful to non-specialists.

I thank the authors also for responding to my final remarks.

As I wrote in previous reviews, the paper has a great storyline, is excellently written, has very insightful and clean visualizations, and achieves its purpose very well. I am sure many people will enjoy reading it.

Please get it online as soon as possible.

Best wishes,

STYLE FILE INFORMATION:

Questions on submitting Tex files:

What submission item should I use for a Tex file? The best submission item to use for a tex file is a "Manuscript" or similar worded submission item description.

What if my Tex file(s) doesn't build? First, look in the PDF to see if an error message is available. If the error message suggests you are missing a sty file, then this may be the cause that the Tex submission will not build. If your submission still is not building after attempting to fix your Tex file from the suggested error message, you may want to verify the following:

Are your images referenced correctly? Images cannot be referenced in subfolders, otherwise they will not appear in the PDF

Are all your accompanying files referenced correctly in your Tex file?

Why can't I submit Tex files and DVI files together? The System will accept either a Tex file(s) OR a DVI file. If your DVI file does not build, then it is suggested you instead submit a Tex file. If you submit a DVI file and it does not build correctly, then you will need to provide the Tex file in order for the building problem to be researched.

What if my figures are not appearing? It may be possible that your images are referenced in subfolders. Images cannot be referenced in subfolders, otherwise they will not appear in the PDF. One example of a correctly referenced image is: `epsfig{figure=alld.eps,width=.5 extwidth}`. An example of an incorrectly referenced image is: `epsfig{figure=images/alld.eps,width=.5 extwidth}`

What if I view large or cut off EPS images? If you view large or cut off images, then you will need to resize the image to fit on one 8.5 x 11 page. When there is a problem caused by not resizing PostScript files (the images get cut off...) the author will either need to resize the images or save the files in a format that EM can recognize as an image. (Perhaps as a TIFF or a JPEG). Please note that EPS files are the best choice for image files in Tex submissions.

Do I need to use my STY files too? Yes. The sty files will be needed to properly build your submission.

What if I see (?) Question marks in my PDF? If you see question marks in the references of your PDF, most likely your Tex file(s) are in subdirectories. Tex submissions cannot include subdirectories for your submission to properly build. All associated files must be in one directory for the submission to build.

Please note:

- 1) The best image/figure file types for Tex submissions are EPS files. The author should attempt to submit EPS images for all their figure files. The author should verify that their EPS images are not in subfolders, otherwise the files may not build into the submission
- 2) The author should look at the error generated at the end of their Tex submission. The author should verify the format of their Tex submission, as the error message suggests the Tex file may be corrupt.
- 3) The author should re-verify that the submission and all of their accompanying Tex related files (STY files, etc) are uploaded to the submission
- 4) The author should then re-build their submission.
- 5) The author verify their images are not in subfolders, otherwise the images may not appear.

For your reference, a sty file is:

STY is the file extension for a Style sheet file. A STYLE template may be used by different publishers to define what should be bold/centered/italic in the paper.

The link below to Springer's own site can be used for latex references:
<http://www.springer.com/sgw/cda/frontpage/0,,5-164-2-72376-0,00.html>

We rely on the authors to create their sty files. Authors need to create their sty files to govern their own work.

There is a link below we found in Google that may assist the author in completing their submission.

<http://www.sci.usq.edu.au/staff/robertsa/LaTeX/latexintro.html>

TeX Web Resources

There has been a significant increase in the number of TeX submissions to journals using Editorial Manager. While we do not offer direct technical support for TeX, just as we don't offer direct technical support for Microsoft Word, we have compiled a list of TeX-related web sites for journals to use, but please do feel free to distribute this information to your authors if you deem it helpful.

Helpful TeX Links:

Beginners guide to TeX

This excellent introduction to TeX contains links to a basic explanation of TeX, a more thorough overview, and FAQs. You'll also find user help, documentation, sample documents, and a list of recommended reference books.

<http://www.tug.org/begin.html>

The Comprehensive TeX Archive Network

If you know absolutely nothing about TeX and would like to learn about what TeX is and where it came from, be sure to take a look at the article entitled "What is TeX?" There is a search function for files and documentation on the site as well as links to sign up for TeX users groups and announcements lists.

<http://www.ctan.org/>

TeX Guides

An excellent resource offering a variety of TeX guides including guides for Mathematical Symbols in TeX and TeX for Word Processor Users.

<http://www.mcs.vuw.ac.nz/~david/latex/>

LaTeX Encyclopedia

An online LaTeX "encyclopedia". The site contains a table of contents with links to information on documentation, installation, typography, and a Navigator for the site.

<http://tex.loria.fr/>

LaTeX Math Guide

The American Mathematical Society's Short Math Guide for LaTeX.

<ftp://ftp.ams.org/pub/tex/doc/amsmath/short-math-guide.pdf>
